A new and unique educational program is needed to reach children and encourage healthy behaviors as early as possible.

**Obesity:**
- 16% of children (over 9 million 6-19 year olds) are overweight or obese

**Cardiovascular Disease:**
- In a population-based sample
  - Approximately 60% of obese children aged 5 to 10 years had at least one cardiovascular disease risk factor
  - 25% had two or more risk factors

**Diabetes:**
- For children born in the United States in 2000
  - 30% of boys and 40% of girls are at risk of being diagnosed with Type 2 diabetes at some point in their lives

**Schools are the Ideal Setting:** The majority of young people aged 5-17 years spend time in schools each day. Schools provide an ideal setting for teaching children and teens to adopt healthy eating and physical activity behaviors.

The CDC reports that school-based health education programs that encourage healthy behaviors are the most effective method of combating cardiovascular illnesses and can reduce the prevalence of obesity by 50% among elementary school children.

**Sources:** Center for Disease Control, Institute of Medicine
Why is this Program Needed for Adults?

Ensuring that all Americans have access to early, affordable and appropriate health education is essential to reducing disability and costs.
